

Duplex filter with filter element according to DIN 24550

Type 50LDN0040 to 0400; 50LD0130, 0150

RE 51453

Edition: 2021-04

Replaces: -

H7833_d

- ▶ Size according to **DIN 24550**: 0040 to 0400
- ▶ Additional sizes: 0130, 0150
- ▶ Nominal pressure 50 bar [725 psi]
- ▶ Connection up to 1 1/2"
- ▶ Operating temperature -10 °C to +100 °C [14 °F to 212 °F]

Features

Duplex filters are used in hydraulic systems for separating solid materials from the fluids and lubricating oils. They are intended for installation into piping and allow for the exchange of the filter element without operational interruption.

They distinguish themselves by the following:

- ▶ Filters for inline installation
- ▶ Special highly efficient filter materials
- ▶ Filtration of very fine particles and high dirt holding capacity across a broad pressure differential range
- ▶ High collapse rating of the filter elements
- ▶ By default equipped with mechanical optical maintenance indicator with memory function
- ▶ Various, optional electronic switching elements, modular design
- ▶ Optional bypass valve integrated in the filter housing
- ▶ Pressure equalization function integrated in the switch-over valve
- ▶ Optional measuring port

Filter design

Easy selection of the filter size is made possible by the FilterSelect online tool. The filter can be designed using the operating pressure, flow and fluid system parameters. The required filter rating is based on the application, the sensitivity to contamination of the components and the environmental conditions.

The program leads you through the menu on a step-by-step basis.

A documentation of the filter selection can finally be created in the form of a PDF file. This file contains the entered parameters, the designed filter with material number including spare parts, and the pressure loss curves.

Function, section

The 50LD(N) duplex filter is suitable for direct installation into pressure lines. It is installed upstream of the components to be protected. Any use in the suction area is not admissible.

It basically consists of a filter head (1) with switch-over fitting (5) and integrated pressure equalization function, two screwable filter bowls (2), two filter elements (3) as well as a mechanical optical maintenance indicator (4). In case of filters with low collapse filter elements (= code letter pressure differential A), there is also an integrated bypass valve (10).

Via the inlet, the fluid reaches the filter element (3) where it is cleaned. The dirt particles filtered out collect in the filter element (3). Via the outlet, the filtered fluid enters the hydraulic circuit.

The filter housing and all connection elements are designed so that pressure peaks - as they may e.g. occur in case of abrupt opening of large control valves due to the accelerated fluid weight - can be securely absorbed. For sizes 0160 and larger the filter bowl is equipped with a drain plug (6).

Via the bleed screws and/or the optional bleed valves - supplementary information E - (7, 8), the filter side to be maintained can be bled.

Measuring ports in the form of threaded couplings on clean and dirt side are available in the type key under the supplementary information "M".

By default, the filter is equipped with mechanical optical maintenance indicator (4). The electronic switching element (9) which has to be ordered separately is attached to the mechanical optical maintenance indicator (4) and held by means of a locking ring.

The electronic switching elements with 1 or 2 switching points are connected via a mating connector according to IEC-60947-5-2 or via a cable connection according to EN17301-803.

Type 50LDN0160

WARNING!

If the maintenance indicator is ignored when an element change is required, there is the possibility the filter will go into bypass and contaminated oil will pass to the clean side of the filter outlet. Therefore the filtration effectiveness is no longer guaranteed.

	- containing water	HFAS	NBR
		HFAE	NBR
		HFC	NBR

Important information on hydraulic fluids!

- For more information and data on the use of other hydraulic fluids, please refer to data sheet 90220 or contact us.
- **Flame-resistant - containing water:** Due to possible chemical reactions with materials or surface coatings of machine and system components, the service life with these hydraulic fluids may be less than expected. Filter materials made of filter

paper P... (cellulose) may not be used, filter elements with filter materials made of glass fiber have to be used instead.

- **Bio-degradable:** If filter materials made of filter paper are used, the filter life may be shorter than expected due to material incompatibility and swelling.

Maintenance indicator (dimensions in mm [inch])

**Pressure differential indicator
with assembled switching element M12x1**

**Pressure differential indicator
with assembled switching element EN-175301-803**

- 1 Mechanical optical maintenance indicator;
max. tightening torque $M_{A \max} = 50 \text{ Nm}$ [36.88 lb-ft]
- 2 Switching element with locking ring for electrical maintenance indicator (rotatable by 360°);
round plug-in connection M12x1, 4-pole
- 3 Switching element with locking ring for electrical maintenance indicator (rotatable by 360°);
rectangular plug-in connection EN175301-803
- 4 Housing with three LEDs: 24 V =
Green: Stand-by
Yellow: Switching point 75 %
Red: Switching point 100 %
- 5 Visual indicator with memory function
- 6 Locking ring DIN 471-16x1,
material no. R900003923
- 7 Name plate

Notices:

Representation contains mechanical optical maintenance indicator (1) and electronic switching element (2) (3).

Assembly, commissioning, maintenance

Assembly

The max. operating pressure of the system must not exceed the max. admissible operating pressure of the filter (see name plate).

During assembly of the filter (see also chapter "Tightening torques"), the flow direction (direction arrows) and the required servicing height of the filter element (see chapter "Dimensions") are to be considered.

Proper function is only guaranteed in the installation with the filter bowl vertically downwards. The maintenance indicator must be arranged so it is easily viewed in operation. Remove the plastic plugs in the filter inlet and outlet.

Ensure that the system is assembled without tension stress.

The optional electronic maintenance indicator is connected via the electronic switching element with 1 or 2 switching points, which is attached to the mechanical optical maintenance indicator and held by means of the locking ring.

Commissioning

Bring the switching lever into central position in order to fill both filter sides.

Start the system.

Bleed filter by opening the bleed screws or bleed valves, close when operating liquid begins to escape..

Switch the filter into the operating position; to do so, switch the switching lever to one of the two end positions. The switch-over lever is on the filter side that is out of order.

Maintenance

- ▶ If at operating temperature, the red indicator pin reaches out of the mechanical optical maintenance indicator and/or if the switching process in the electronic switching element is triggered, the filter element is contaminated and needs to be replaced or cleaned respectively.
- ▶ The material number of the corresponding replacement filter element is indicated on the name plate of the complete filter. It must correspond to the material number on the filter element.
- ▶ The switch-over lever is on the filter side that is out of order. Observe the switching symbol on the switching lever and/or the switch-over.
- ▶ For pressure equalization and unlocking, pull the switch-over lever and switch to the opposite end position.
- ▶ Open the bleed screw or bleed valve at the decommissioned filter side in order to reduce the pressure.
- ▶ Via the drain screw (from size 0160 and larger), the oil on the dirt side can be drained.
- ▶ Unscrew the filter bowl – see figure assembly aid.
- ▶ Remove the filter element from the spigot by rotating it slightly.
- ▶ Clean the filter components, if necessary.
- ▶ Check the seals at the filter bowl for damage and replace them, if necessary.
For suitable seal kits refer to chapter "Spare parts".
- ▶ Filter elements made of wire mesh can be cleaned. The efficiency of the cleaning process depends on the type of dirt and the amount of the pressure differential before the filter element exchange. If the pressure differential after the filter element exchange exceeds 150 % of the value of a brand-new filter element, the filter element made of wire mesh (G...) also needs to be replaced. For detailed cleaning instructions refer to data sheet 51420.
- ▶ Install the new or cleaned filter element on the spigot again by slightly rotating it.
- ▶ The filter is to be assembled in reverse order.
- ▶ The torque specifications ("Tightening torques" chapter) are to be observed.
- ▶ To fill the maintained filter side, pull the switch-over lever.
- ▶ The filter is bled via the bleed screw or the bleed valve which is still open.
- ▶ After fluid escapes, close the bleed screw or the bleed valve again.
- ▶ Make sure that the switch-over lever is engaged.

WARNINGS!

- ▶ Assemble and disassemble only with depressurized system! For the filter element exchange refer to "Maintenance".
 - ▶ Tank is pressurized!
 - ▶ Maintenance only by trained specialists.
 - ▶ Remove the filter bowl only if it is depressurized !
 - ▶ Do not exchange the maintenance indicator while the filter is under pressure!
 - ▶ Do not operate the switching lever during the filter element exchange.
- ▶ When disassembling the filter, ensure that the downstream side is depressurized via the system.
 - ▶ Warranty is only applicable when using genuine Hengst spare parts!
 - ▶ Warranty becomes void if the delivered item is changed by the ordering party or third parties or improperly mounted, installed, maintained, repaired, used or exposed to environmental condition that do not comply with the installation conditions.

Directives and standardization

Product validation

Hengst filters, the filter elements built into them and filter accessories are tested and quality-monitored according to different ISO test standards:

Pressure pulse test	ISO 10771:2015-08
Filtration performance test (multipass test)	ISO 16889:2008-06
Δp (pressure loss) characteristic curves	ISO 3968:2001-12
Compatibility with hydraulic fluid	ISO 2943:1998-11
Collapse pressure test	ISO 2941:2009-04

The development, manufacture and assembly of Hengst industrial filters and Hengst filter elements is carried out within the framework of a certified quality management system in accordance with ISO 9001:2015.

Classification according to the Pressure Equipment Directive

The duplex filters for hydraulic applications according to 51453 are pressure holding equipment according to article 1, section 2.1.4 of the Pressure Equipment Directive 97/23/EC (PED). However, based on the exception in

article 1, section 3.6 of the PED, hydraulic filters are exempt from the PED if they are not classified higher than category I (guideline 1/19).

They do not receive a CE mark.

Use in explosive areas according to directive 94/9/EC (ATEX)

The duplex filters according to 51453 are not equipment or components in the sense of directive 94/9/EC and are not provided with a CE mark. It has been proven with the ignition risk analysis that these inline filters do not have own ignition sources acc. to DIN EN 13463-1:2009.

According to DIN EN 60079-11:2012, the electronic maintenance indicators WE-1SP-M12x1 and WE-1SP-EN175301-803 are simple, electronic operating equipment not having an own voltage source. This simple, electronic operating

equipment may - according to DIN EN 60079-14:2008 - in intrinsically safe electric circuits (Ex ib) be used in systems without marking and certification.

The duplex filters and the electronic maintenance indicators described here can be used for the following explosive areas:

	Zone suitability	
Gas	1	2
Dust	21	22

Complete filter with mech./opt. maintenance indicator

Use /assignment		Gas 2G	Dust 2D
Assignment		Ex II 2G c IIB TX	Ex II 2D c IIB TX
Conductivity of the medium	pS/m min	300	
Dust accumulation	max	-	0.5 mm

Electronic switching element in the intrinsically safe electric circuit

Use /assignment		Gas 2G	Dust 2D
Assignment		Ex II 2G Ex ib IIB T4 Gb	Ex II 2D Ex ib IIIC T100 °C Db
Adm. intrinsically safe electric circuits		Ex ib IIC, Ex ic IIC	Ex ib IIIC
Technical data		Values only for intrinsically safe electric circuit	
Switching voltage	Ui max	150 V AC/DC	
Switching current	Ii max	1.0 A	
Switching power	Pi max	1.3 W T4 T_{max} 40 °C	750 mW T_{max} 40 °C
		1.0 W T4 T_{max} 80 °C	550 mW T_{max} 100 °C
Surface temperature ¹⁾	max	-	100 °C
Inner capacity	Ci	Neglectable	
Inner inductivity	Li	Neglectable	
Dust accumulation	max	-	0.5 mm

¹⁾The temperature depends on the temperature of the medium in the filter and must not exceed the value specified here.

Directives and standardization

Possible circuit according to DIN EN 60079-14

⚠ WARNING!

- ▶ Explosion hazard due to high temperature!
The temperature depends on the temperature of the medium in the hydraulic circuit and must not exceed the value specified here. Measures are to be taken so that in the explosive area, the max. admissible ignition temperature is not exceeded.
- ▶ When using the inline filters according to 51453 in explosive areas, appropriate potential equalization has to be ensured. The filter is preferably to be grounded via the mounting screws.

It has to be noted in this connection that paintings and oxidic protective layers are not electrically conductive.

- ▶ Maintenance only by specialists, instruction by the machine end-user acc. to DIRECTIVE 1999/92/EC appendix II, section 1.1.
- ▶ During filter element exchanges, the packaging material is to be removed from the replacement element outside the explosive area.
- ▶ Functional and safety warranty only applicable when using genuine Hengst spare parts.
